## PRODUCT RANGE

## SIDE GRIP PILE DRIVERS

## Excavator (carrier)

The excavator must be suitable - and match - the specific vibratory pile driver in question in regards to hydraulic power (oil flow @ pressure). Thus the excavator brand \& model is needed for the correct selection of model.

## Soil conditions

Vibratory pile drivers are suitable for a wide range of soil conditions \& $N$-values (SPT). In order to make a detailed analysis of the suitability of a MOVAX model for a specific project a soil report is needed.

## Type \& dimension of piles

In order to select the correct MOVAX model, the type of piles (sheet pile, H-beam, tubular steel pile and/or timber pile) and their dimensions (length, width/depth, OD) are needed. Due to the modular design (MOVAX Modular System) the same MOVAX side grip pile driver can be used to drive different type of piles.

## Site conditions

MOVAX side grip pile drivers are the optimum solution for sites with limited access, space or headroom. Standard (STD) and Lite models are selected for a wide range of piling jobs. Resonance-free $(V)$ models are selected for sensitive areas where disturbances to the surroundings are to be minimized.

## PRELIMINARY!

When making the final selection the excavator engine size and hydraulic system design (oil pump arrangement, oil flow rate/pressure etc.), excavator lifting capacity and stability and soil and site conditions shall be taken into account.
